

tas: spatial fan of the full grid + LOESS of the spatial median

area-weighted SPATIAL quantiles across cells (5–95% light, 25–75% dark) = heterogeneity, not sampling error; red = loess(median) $\pm 1.96 \cdot \text{se}$, pointwise, iid assumption (autocorrelation not adjusted)

pr: spatial fan of the full grid + LOESS of the spatial median
